SEO Assignment

SEO Fundamentals, Keyword Research, On-Page & Off-Page SEO

Submitted by	Mannik Gupta
Country	India
Website analysed	growlocaldigital.wuaze.com
Date	23 October 2026
Contents	Part A: Theory (6 questions) | Part B: Task 1 Website Analysis, Task 2 Keyword Research, Task 3 SEO Blog, Task 4 Link-Building Plan

Part A: Theoretical Questions

1. What is SEO, and why is it important for websites?

SEO (Search Engine Optimization) is the process of improving a website's content, technical health and authority so that it ranks higher in unpaid, organic search results on engines like Google. It matters because most online journeys begin with a search, and the top results receive the majority of clicks. Effective SEO drives targeted traffic without per-click costs, builds credibility and trust, improves user experience, and generates leads and sales over the long term. For small businesses, it also levels the playing field against larger competitors.

2. Explain the difference between On-Page and Off-Page SEO.

On-Page SEO covers everything done inside the website: keyword-optimized titles, meta descriptions, headings, URLs, quality content, internal links, image alt text, page speed and mobile responsiveness. Off-Page SEO covers activities outside the site that build authority and trust, mainly backlinks, plus brand mentions, guest posting, social sharing and online reviews. On-Page SEO is fully under your control and tells search engines what a page is about, while Off-Page SEO shows how credible and popular the site is. Both are needed for strong rankings.

3. What is a keyword, and how do you perform keyword research?

A keyword is a word or phrase people type into a search engine, such as "digital marketing agency in Delhi NCR". To perform keyword research: (1) define your niche and audience; (2) list seed keywords; (3) expand them using Google Keyword Planner, Ubersuggest, Google Autocomplete and "People also ask"; (4) check search volume, keyword difficulty and CPC; (5) study search intent and competitors; and (6) prioritize low-difficulty, high-intent keywords and map each one to a specific page.

4. Define the following terms:

a. Meta Title: the HTML title tag shown as the clickable headline in search results; ideally 50–60 characters with the main keyword.
b. Meta Description: a 150–160 character summary under the title in search results; it improves click-through rate.
c. Backlink: a link from another website to yours, treated as a vote of trust; quality matters more than quantity.
d. Alt Tag: the alt attribute of an image that describes it to screen readers and search engines.

5. What are black hat and white hat SEO techniques? Give examples.

White hat SEO follows search engine guidelines and focuses on users. Examples: original, valuable content, proper keyword research, earning backlinks through guest posts, fast mobile-friendly design and clean site structure. Black hat SEO manipulates algorithms for quick rankings. Examples: keyword stuffing, cloaking, hidden text, buying links or private blog networks, spun content, doorway pages and comment spam. Black hat tactics risk penalties or de-indexing, whereas white hat techniques deliver safe, sustainable, long-term results.

6. How do search engines crawl and index websites?

Search engines use bots such as Googlebot to discover pages by following links, reading XML sitemaps and processing submitted URLs; robots.txt tells them which areas they may crawl. After crawling, the page is rendered and analyzed (text, titles, images, links, structure) and stored in a huge database, which is indexing. When someone searches, the engine ranks indexed pages by relevance and quality. Internal linking, sitemaps, fast loading, and avoiding noindex tags or duplicate content help pages get indexed.

Part B, Task 1: Website Analysis

Website analysed: GrowLocal Digital, https://growlocaldigital.wuaze.com/, a WordPress/Elementor website for a Delhi NCR local-business marketing agency. Findings come from a review of the page's HTML source.

1. Title and meta description. The page title (118 characters) targets good keywords but is far too long. Google cuts titles at about 60 characters, so "That Helps Local Businesses Grow" and the brand would be hidden. The meta description (158 characters) is well optimized: it stays under 160 characters, names the location and services, and promises a benefit.

2. URL structure. Internal URLs are clean, lowercase and hyphenated (/local-seo/, /google-ads/, /website-development/, /contact/), and a canonical tag points to the root URL, which prevents duplicate-content issues. The weak point is the free wuaze.com subdomain, which has no brand authority and looks less trustworthy than a custom domain.

3. Headings. There is exactly one H1, "Turn local searches into real customers." It is clear but contains none of the target keywords (local SEO, digital marketing, Delhi NCR). The H2 tags follow logical sections and H3 tags label the cards. One small flaw: an H3 in the hero box appears before the first H2.

4. Mobile-friendliness. The viewport meta tag is present and the theme has a mobile menu button, so the layout is responsive. Lighthouse gives Accessibility 94, flagging low colour contrast and headings not in descending order, which confirms the H3-before-H2 issue. The html tag declares lang="en-US" while the schema uses en-IN; align them.

5. Page speed. PageSpeed Insights (23 Oct 2026) gives Performance 96 on mobile and 97 on desktop. Mobile metrics: FCP 1.7 s, LCP 1.7 s, TBT 0 ms and CLS 0, all green; only Speed Index (4.5 s) is amber. The main issue is render-blocking requests (estimated savings 1,180 ms mobile, 850 ms desktop). Fixes: inline critical CSS, defer unused Elementor CSS and trim Google Fonts weights. No real-user data exists yet because traffic is low.

6. Other observations. Structured data exists, but a LocalBusiness schema with address and logo would strengthen local SEO. An og:image is missing.

Conclusion. The site has a strong technical base. Priority fixes: shorten the title, add keywords to the H1, fix heading order and language tag, reduce render-blocking CSS and use a custom domain.

Audit snapshot

Parameter	Finding (from page source)	Status
Page title	118 characters; keyword-rich but too long and repetitive	**Fix**
Meta description	158 characters; includes location, services and benefit; no CTA	**Good**
H1 / H2 tags	1 H1 (no target keyword); 5 H2s in logical order	**Improve**
URL structure	Clean, hyphenated slugs; canonical tag present; free wuaze.com subdomain	**Improve**
Viewport / mobile menu	Viewport tag, mobile nav toggle and skip link present	**Good**
Language tag	html lang="en-US" vs en-IN in schema and Open Graph	**Improve**
Structured data / Open Graph	Organization, WebSite, WebPage schema and OG tags present; no og:image	**Improve**
Caching	W3 Total Cache page caching active	**Good**
Fonts / CSS	Full Roboto and Roboto Slab families plus 5+ CSS files are render-blocking	**Improve**

Parameter	Finding (from page source)	Status
PageSpeed – Mobile (Slow 4G)	Performance 96, Accessibility 94, Best Practices 100, SEO 100	**Good**
Mobile metrics	FCP 1.7 s | LCP 1.7 s | TBT 0 ms | CLS 0 | Speed Index 4.5 s (amber)	**Good**
PageSpeed – Desktop	Performance 97, Accessibility 94, Best Practices 100, SEO 100; FCP 0.5 s | LCP 0.5 s | TBT 0 ms | CLS 0 | Speed Index 1.7 s	**Good**
Lighthouse issues	Render-blocking requests (1,180 ms mobile / 850 ms desktop); low colour contrast; heading order	**Improve**

Recommended optimized meta tags and H1

Title (57 chars): Digital Marketing Agency in Delhi NCR | GrowLocal Digital

Description (143 chars): Local SEO, Google Ads and website services for Delhi NCR businesses. GrowLocal Digital turns searches into enquiries. Book a free consultation.

Suggested H1: Digital Marketing for Delhi NCR Businesses: Turn Local Searches into Customers

Method: manual review of the page's HTML source; speed and accessibility scores from Google PageSpeed Insights (23 Oct 2026).

Part B, Task 2: Keyword Research

Topic: Digital marketing, local SEO and Google Ads services for local businesses in Delhi NCR (matching the services on the analysed website). **Tools:** Google Keyword Planner, Ubersuggest, Google Autocomplete.

#	Keyword	Type	Est. monthly searches (India)	Keyword difficulty (0–100)	Est. CPC (₹)
1	digital marketing	Short-tail	100K+	80+ (Very hard)	₹30–80
2	local SEO	Short-tail	2K–10K	55 (Hard)	₹50–120
3	website development	Short-tail	20K–50K	65 (Hard)	₹40–100
4	digital marketing agency in Delhi NCR	Long-tail	200–800	40 (Medium)	₹60–140
5	local SEO services in Delhi	Long-tail	200–800	30 (Medium)	₹60–130
6	Google Ads management services in Delhi NCR	Long-tail	50–200	20 (Easy)	₹80–180
7	website development company for small business in Delhi	Long-tail	100–500	30 (Medium)	₹50–120
8	Google Business Profile optimization services India	Long-tail	50–300	20 (Easy)	₹30–90
9	lead generation services for local businesses	Long-tail	100–500	30 (Medium)	₹40–100

Note: Volume, difficulty and CPC are approximate ranges for the Indian market; exact figures change monthly and differ between tools. Keyword difficulty is on a 0–100 scale (Ubersuggest style).

Classification & strategy

Short-tail keywords (1–2 words) such as "digital marketing" and "local SEO" have huge volume but very high competition and vague intent, so they suit long-term goals. **Long-tail** keywords (3+ words) such as "local SEO services in Delhi" have lower volume but lower difficulty, clearer buying intent and better conversion rates.

Recommendation: map each keyword to a page on the site: #5 and #8 to /local-seo/, #6 to /google-ads/, #7 to /website-development/, #9 to /lead-generation/ and #4 to the homepage. Start with the easier keywords (#6, #8, #5, #9), then build authority for #4 and #7, and compete for the short-tail terms last.

Part B, Task 3: SEO-Optimized Blog Post

Focus keyword: digital marketing career
Meta title (59 chars): Digital Marketing Career in India: Skills, Salary & Roadmap
Meta description (150 chars): Planning a digital marketing career in India? Explore top roles, must-have skills, expected salaries and a simple step-by-step roadmap to get started.
URL slug: /digital-marketing-career-india/

H1: Digital Marketing Career in India: Skills, Salary & Roadmap

India is going online faster than ever. Every business, from a neighbourhood shop in Delhi NCR to a global startup, needs customers who find them on Google, Instagram and YouTube. That demand has made a digital marketing career one of the most promising options for students and graduates. Whether you come from commerce, arts or engineering, this field rewards skills more than degrees. Here is everything you need to start.

H2: Why Choose a Digital Marketing Career?

First, demand is strong. Companies are shifting advertising budgets from print and TV to digital channels, creating steady openings in agencies, startups and in-house teams. Second, entry barriers are low: you can learn most skills online through free courses and practise on real projects. Third, the field is flexible. You can take a job, freelance or even launch your own agency. Finally, a digital marketing career blends creativity with data, so it suits both writers and analytical thinkers.

H2: Popular Roles in Digital Marketing

- **SEO Specialist:** improves website rankings in organic search results.
- **Social Media Manager:** builds brand communities and runs content calendars.
- **Performance Marketer (PPC):** manages paid campaigns on Google and Meta.
- **Content Marketer:** creates blogs, videos, newsletters and e-books.
- **Web Analyst:** tracks data with GA4 and turns numbers into decisions.

H2: Skills You Need to Succeed

Start with the fundamentals: search engine optimization, copywriting, paid advertising, email marketing and analytics. Learn tools such as Google Analytics, Search Console, Canva and a social media scheduler. Employers also value curiosity, clear communication and adaptability. AI tools now help with research and first drafts, but strategy and creativity remain human strengths, so learn to use AI as an assistant rather than a replacement.

H2: Salary Expectations in India

Pay varies by city, skills and company, so treat these figures as rough estimates. Freshers often start at about ₹2.5–4.5 lakh per year, professionals with three to five years of experience earn around ₹6–12 lakh, and senior managers or specialists can cross ₹15 lakh. Freelancers and agency owners may earn more, though income depends on clients and consistency.

H2: How to Start Your Digital Marketing Career

1. **Learn the basics.** Free certifications from Google Skillshop cover ads, analytics and more.
2. **Pick a niche.** Choose SEO, social media, paid ads or content, then go deeper.
3. **Build a practice website.** Run your own blog or page to test what works.
4. **Gain experience.** Take internships or help local businesses; see how a local agency such as GrowLocal Digital supports small brands.

5. **Show your results.** Create a portfolio and an optimized LinkedIn profile.

H2: Future Scope of the Industry

Short video, voice search, influencer marketing, marketing automation and AI-driven personalisation are reshaping the field. Small and local businesses are also investing heavily in local SEO and Google Business Profiles to win nearby customers. Professionals who keep updating their skills will find that a digital marketing career stays relevant, well paid and full of new opportunities.

Image alt tag: <img src="digital-marketing-career-roadmap.png" alt="Digital marketing career roadmap in India showing six steps from learning the basics to building a portfolio and getting a job">

H2: Conclusion

A digital marketing career today offers growth, flexibility and strong earning potential for anyone willing to keep learning. Start small, practise on real projects and build a portfolio that proves your skills. The sooner you begin, the sooner you will stand out in a crowded job market.

SEO checklist: focus keyword used 6 times | 1 internal link (GrowLocal Digital) | 1 external link (Google Skillshop) | H1 + H2 headings | image with alt tag | approx. 526 words.

Part B, Task 4: Link-Building Plan (Extra Credit)

Website type: online courses platform. **Goal:** earn relevant, high-quality backlinks to improve authority and rankings for course pages, using only white hat methods.

Method	How it works	Target websites / platforms	Tools
1. Guest posting	Write expert, original articles (career tips, study skills, upskilling) and earn a contextual link to a relevant course page or author bio.	Education and career blogs, student community sites, tech/skill blogs, LinkedIn Articles and Medium (for reach and brand mentions)	Google search operators ("write for us" + education), Ubersuggest, Ahrefs/Semrush
2. Resource-page and broken-link building	Find 'best free learning resources' pages or dead links on relevant sites; suggest your course or guide as the replacement or addition.	College career-cell pages, university resource libraries, edu bloggers, scholarship and skill-development portals	Check My Links (Chrome), Ahrefs broken-link report
3. Digital PR and partnerships	Publish original data (e.g. a survey on skills Indian students want) and pitch it; run joint webinars with colleges and creators.	Education news sites, journalists, colleges and student clubs (.ac.in / .edu links), YouTube educators and podcasts	Google Forms, Canva, HARO-style expert-request platforms, email outreach tools

Quality rules

Prefer sites that are relevant to education, careers or skills, have real traffic and editorial standards, and link naturally inside content. Avoid paid link farms, private blog networks and irrelevant directories. Use varied anchor text (brand, URL and descriptive phrases) and track results monthly in Google Search Console.

Sample monthly targets

5–10 personalised outreach emails per week; 2–4 published guest posts per month; 3–5 resource-page or broken-link placements per month; 1 original data study per quarter.

Outreach email template (guest post)

Subject: Guest post idea for [Blog Name]: "5 Skills Students Should Learn Before Graduation"

Hi [Editor's Name],

I'm [Your Name] from [Course Website], an online learning platform helping students in India build job-ready skills. I have been reading [Blog Name] and really liked your recent article on [specific article title].

I would love to contribute a unique, well-researched guest post for your readers. Some ideas: (1) 5 Skills Students Should Learn Before Graduation, (2) How to Build a Portfolio Without Experience, (3) Free vs Paid Courses: What Employers Actually Value.

The article would be 100% original, around 1,000 words, with relevant images, and not published anywhere else. I'm happy to adapt the topic to your editorial guidelines.

Could I send a detailed outline this week? Thank you for your time!

Warm regards,
[Your Name]
[Designation], [Course Website]
